About me

I am a passionate and dedicated Full-Stack Web Developer with a solid foundation in modern web technologies. As a fresher, I have hands-on experience building responsive and dynamic web applications using HTML, CSS, JavaScript, Bootstrap, Tailwind CSS, React.js, and Next.js. I'm also skilled in backend development with Node.js and Express.js, creating RESTful APIs and managing server-side logic. I enjoy crafting user-friendly, visually appealing websites with clean code and optimized performance. I'm eager to grow by working on real-world projects, collaborating with development teams, and continuously improving my skills. I'm seeking an opportunity to contribute to impactful digital solutions.

Projects

Random-Joke-Generator-APICalling

The Random Joke Generator is a web application that fetches and displays random jokes from a third-party API. The app provides users with an easy way to generate fresh jokes at the click of a button. This project demonstrates API integration, asynchronous JavaScript (async/ await), and user interaction handling. The UI is designed for a seamless experience, making it simple and engaging for users to fetch and enjoy jokes.

Achievements

Dynamic UI Updates: Displayed jokes instantly without page reloads using efficient DOM manipulation techniques.
Error Handling: Implemented robust error handling to manage API failures and maintain a smooth user experience.
Performance Optimization: Minimized unnecessary re-renders to improve performance and responsiveness.
User Engagement: Designed a clean, modern UI with smooth animations to enhance interactivity and visual appeal.

Responsive Food Website (React & Tailwind CSS)

Designed and developed a fully responsive food website using React.js and Tailwind CSS, showcasing a variety of items like fruits, juices, and meals. Focused on creating a clean, modern user interface with reusable components and smooth animations. Implemented dynamic content rendering, interactive elements, and mobile-first design principles to ensure seamless user experience across all devices. Emphasized performance optimization and intuitive navigation throughout the project.

Achievements

Built a **mobile-friendly interface** with optimized layouts using Tailwind's utility-first classes.
Improved **user interaction with animated transitions and responsive** navigation.
Applied **reusable React components** to ensure scalability and maintainability.
Integrated a modern design system to enhance accessibility and visual appeal.
Deployed the project online (**GitHub**).
